

# ARGWEB 'one-page' Overview

# ARGWEB – ARG Management Software

ARGWEB is a cloud-based Amphibian and Reptile Groups' management software tool, developed by the ARGs, for the ARGs to make life easier for those managing an ARG. Best of all, **it costs nothing!**

It has been developed and field tested for over a decade, and is the generic version of the highly successful Surrey ARG management software. It has multi-level security and helps to:

## Manage the ARG membership

- Members' Database
- PayPal integration
- Manages licence permissions
- Manages training-based permissions
- Maintains interest groups with a built-in dynamic emailer
- Generates member CVs

## Manage Survey Direction & Reporting

- Reptile surveys; tin, visual and emergence transects
- All types of amphibian surveys, linked to a ponds database.
- Records Toad Crossing data
- Appends meteorological and moon phase data to all sightings automatically
- Effort-based and negative recording

## Share Data

- Data portals share information to land managers, owners and stakeholders in real time
- Highlights sensitive management areas
- ARGs choose who they share their data with

ARGWEB includes the largest and best database of structured, amphibian and reptile observation data in the British Isles. The Data Fusion engine provides ARGs with multi-source data on one convenient, interactive map application.
